

We are asking you to participate in a research study. This form is designed to give you information about this study. We will describe this study to you and answer any of your questions.

Project Title: A Multicenter, Double-Blind, Randomized, Placebo-Controlled, DoseResponse Trial of YKP3089 as Adjunctive Therapy in Subjects with Partial Onset Seizures, with Optional Open-Label Extension

Principal Investigator: Dr. [Site PI]
Professor of Neurology
[Mock] University Epilepsy Center

KEY INFORMATION

Provided is a short summary of this study to help you decide whether you want to participate. More detailed information is listed later in this form.

- The purpose of the research is to find the effective dose range of Cenobamate (YKP3089) as additional therapy for partial seizures, and to evaluate how safe it is and how well people handle it. About 30% of people with epilepsy, especially those with partial seizures, do not respond to current treatments.
- YKP3089 is an investigational drug, which means the FDA has not approved it. You will keep taking your current seizure medicines; YKP3089 or placebo is added to them
- First, the study team will track how often you have seizures for 8 weeks. If you qualify, you will be randomly assigned to one of four groups: placebo, or YKP3089 at 100, 200, or 400 mg, taken once each morning. You have an equal chance of being in any group, and neither you nor the study doctor will know which one you are in. Treatment lasts 18 weeks. For the first 6 weeks your dose is slowly increased to your group's target, and for the next 12 weeks you stay at that dose. After that, you can stop or continue in an open-label extension. In the extension, everyone takes YKP3089, and after a 2-week switch-over the target dose is 300 mg once daily. Whenever you stop the study drug, your dose will be lowered over 3 weeks, and you will have a final visit 2 weeks after your last dose.
- Your participation in the study is expected to take approximately seven months(31 weeks) if you do not join the optional open-label extension:
 - An 8-week baseline assessment
 - 18 week treatment period (6 weeks of gradual dose increases, then 12 weeks at your assigned dose)
 - 3 week period of slowly lowering the study drug
 - 2 week follow up after the last dose of study drug.
 - If you join the open-label extension, you will have a 2-week conversion period instead of the 3-week taper, then continue taking YKP3089. The extension has no set end date. It continues until the sponsor stops developing the drug, the drug is approved for sale, or the sponsor ends the study. After the first year, visits are every 3 months. When the

extension ends, you will taper off the study drug and have a final visit 2 weeks after your last dose.

- Side effects of YKP3089 include: sleepiness, dizziness, tiredness, trouble walking, involuntary eye movements, and lower blood pressure. Serious rashes and allergic reactions may occur. If you notice a rash, contact the study team right away so you can be seen promptly. Additionally, prolonged seizures may occur. Mood and suicidal thoughts may occur. At study visits you will be asked questions about mood and suicidal thoughts. Tell the study team right away about new or worsening depression or thoughts of harming yourself. YKP3089 may lower levels of carbamazepine and raise levels of norethindrone, a hormone in some birth control pills. Please be sure to inform the study team if you're currently on these medications. Women who can become pregnant must use an approved form of birth control during the study and for 30 days after the last dose. Levels of your other seizure medicines will be checked during the study. Pregnant or breastfeeding women cannot take part
- You may or may not benefit from taking part in this study. If you are assigned to YKP3089, your seizures may become less frequent. This is not guaranteed. If you are assigned to placebo (a 1 in 4 chance), you will not receive YKP3089 during the double-blind part of the study. If you complete the double-blind part, you may join the open-label extension, where everyone receives YKP3089. After 12 months, people who are benefiting may continue taking it at the study doctor's discretion. Others may benefit in the future. This study will help find which doses of YKP3089 work, which may lead to a new treatment option for people whose seizures are not well controlled.
- Taking part in this study is your choice. You may decide not to take part, or you may leave the study at any time. Your decision will not affect your regular medical care or any benefits you are otherwise entitled to. If you decide to leave, please tell the study team first. Stopping the study drug suddenly could increase your risk of seizures, so your dose may be lowered gradually over about 3 weeks. You will be asked to complete end-of-treatment tests and to return for a final visit about 2 weeks after your last dose. The study doctor may stop your participation if you are unable to tolerate the study drug. The sponsor, SK Life Science, may also end the study at any time. You will have time to ask questions before deciding, and you will receive a signed copy of this form. Alternatives: You do not have to take part in this study to receive care for your seizures. Instead, you could continue your current seizure medicines, try other approved seizure medicines, or ask your doctor about non-drug treatments such as epilepsy surgery or nerve stimulation devices. Please discuss the risks and benefits of these options with your doctor.

Enrollment

- We are looking for 49 participants to join us at the Mock University Epilepsy Center study site.

Pregnant Individuals

- Pregnant or breastfeeding women cannot take part in this study
- Women who can become pregnant must use an approved form of birth control during the study and for 30 days after the last dose.

Incentives for participation

- You will not be paid for taking part in this study, and you will not receive any other rewards or incentives for your participation.

Costs

- Please note that there are no billed costs throughout this study directed to the patient. All costs including labs and possible screenings are covered by the sponsor.

Audio/Video Recording

- No audio or video recordings will be made during this study.

Use of Tissue Samples/DNA

- Blood and urine samples will be collected during this study. Your blood will be used for routine safety tests, to measure the amount of study drugs and your other seizure medicines in your body, and, if you can become pregnant, for pregnancy tests. Your urine will be used for routine urine tests and pregnancy tests. No tissue samples will be collected, and no genetic testing will be done. Your samples will be sent to outside laboratories for testing.
- **Extra procedures** - No extra blood draws or other procedures will be done to collect samples for storage. All samples will be collected during your scheduled study visits.
- **Confidentiality** - You will be given a study number, and your study records will be identified by this number. Your information will be kept confidential and handled according to federal privacy law (HIPAA). Representatives of the sponsor, the IRB, and government regulators may review your medical records to check the information collected, and they will keep it strictly confidential.
- **Control and ownership** - Your samples will be sent to a central laboratory and a separate drug-testing laboratory.
- **Your right to withdraw** - You may withdraw your consent at any time. If you do, information already collected about you may still be used. It is not known whether samples already collected can be destroyed, or have your personal information removed, at your request. Your samples will not be anonymous, because the study site keeps a list linking your study number to your identity.
- **Other uses** - There are no plans to use your samples for other research or to create a cell line from them.

If you are injured by this research

In the event that any research-related activities result in an injury, treatment will be made available including first aid, emergency treatment, and follow-up care as needed. The cost for such care will be billed in the ordinary manner to you or your insurance company. No reimbursement, compensation, or free medical care is offered by SK Life Science Inc. If you think that you have suffered a research-related injury, contact your study PI, Dr. [Site PI] at (000)-000-0000.

Privacy/Confidentiality

We will do our best to keep your participation in this research study confidential to the extent permitted by law; however, it is possible that other people may need to review the research records

and may find out about your participation in this study. For example, the following people/groups may check and copy records about this research:

- The Office for Human Research Protections in the U. S. Department of Health and Human Services
- The research study sponsor, SK Life Science Inc.
- The Institutional Review Board (a committee that reviews and approves research studies) and the Office for Research Integrity and Assurance

Please note that email communication is neither private nor secure. Though we are taking precautions to protect your privacy, you should be aware that information sent through e-mail could be read by a third party.

Your confidentiality will be kept to the degree permitted by the technology being used. We cannot guarantee against interception of data sent via the internet by third parties.

Sharing De-identified Data Collected in this Research

Your study information will be labeled with a code number instead of your name. However, some identifying information, such as your initials and date of birth, will be shared with the sponsor and its vendors. The study site will keep a list that links your code number to your name. Representatives of the sponsor, the IRB, and government agencies may review your medical records to check the study data.

De-identified data from this study may be shared with the research community at large to advance science and health. We will remove or code any personal information that could identify you before files are shared with other researchers to ensure that, by current scientific standards and known methods, no one will be able to identify you from the information we share. Despite these measures, we cannot guarantee anonymity of your personal data.

Future use of Identifiable Data or Specimens Collected in this Research

Your information or biospecimens will not be used or distributed for future research studies.

Information about use of your biospecimens

Specimens collected from you for this study and/or information derived from your specimens *will not* be used to generate commercial profit. You *will not* share in any commercial value or other compensation from products developed using these specimens.

You *will not* receive any clinically-relevant results discovered about you and/or the general subject population.

This research will not include whole genome sequencing.

Clinical Trial

A description of this clinical trial will be available on <http://www.ClinicalTrials.gov>, as required by U.S. Law. This Web site will not include information that can identify you. At most, the Web site will include a summary of the results. You can search this Web site at any time.

Taking part is voluntary

Your involvement is voluntary. You may refuse to participate before the study begins, discontinue at any time, or skip any questions/procedures that may make you feel uncomfortable, with no penalty to you.

Follow up studies

We may contact you again to request your participation in a follow up study. As always, your participation will be voluntary and we will ask for your explicit consent to participate in any of the follow up studies.

May we contact you again to request your participation in a follow up study? Yes/No

Withdrawal by investigator, physician, or sponsor

The investigators, physicians or sponsors may stop the study or take you out of the study at any time should they judge that it is in your best interest to do so, if you experience a study-related injury, if you need additional or different medication/treatment, or if you do not comply with the study plan. They may remove you from the study for various other administrative and medical reasons. They can do this without your consent.

If you have questions

The main researcher conducting this study is [First name, Last name], a Chief Medical Officer at SK Life Science Inc. Please ask any questions you have now. If you have questions later, please contact Dr. [First name, Last name] via (000)-000-0000.

If you have any questions or concerns regarding your rights as a subject in this study, you may contact the Institutional Review Board (IRB) for Human Participants via your designated study site.

You will be given a copy of this form to keep for your records.

Statement of Consent

I have read the above information, and have received answers to any questions I asked. I consent to take part in the study.

Your Signature_____ Date_____Time_____

Your Name (printed)_____

Legally Authorized Representative_____ Date_____Time_____

Legally Authorized Representative name (printed)_____

Signature of person obtaining consent_____ Date_____Time_____

Printed name of person obtaining consent_____

This consent form will be kept by the researcher for at least three (3) years beyond the end of the study.
